## Red Hat Enterprise Linux 10: Application Compatibility Guide

Updated May 20 2025 at 7:23 PM - [English](#) ▾

Red Hat Enterprise Linux 10:  
Application Compatibility Guide  
May 2025

**Note:** This article discusses application compatibility for Red Hat Enterprise Linux 10. For Red hat Enterprise Linux 9, please see the [Red Hat Enterprise Linux 9: Application Compatibility GUIDE](#).

**Myth:**  
**CentOS is a rolling release**

# Rolling release?

- rolling releases have:
  - no versions
  - no EOL dates
  - one update channel
- CentOS has:
  - major versions
  - EOL dates per version
  - separate update channels per version

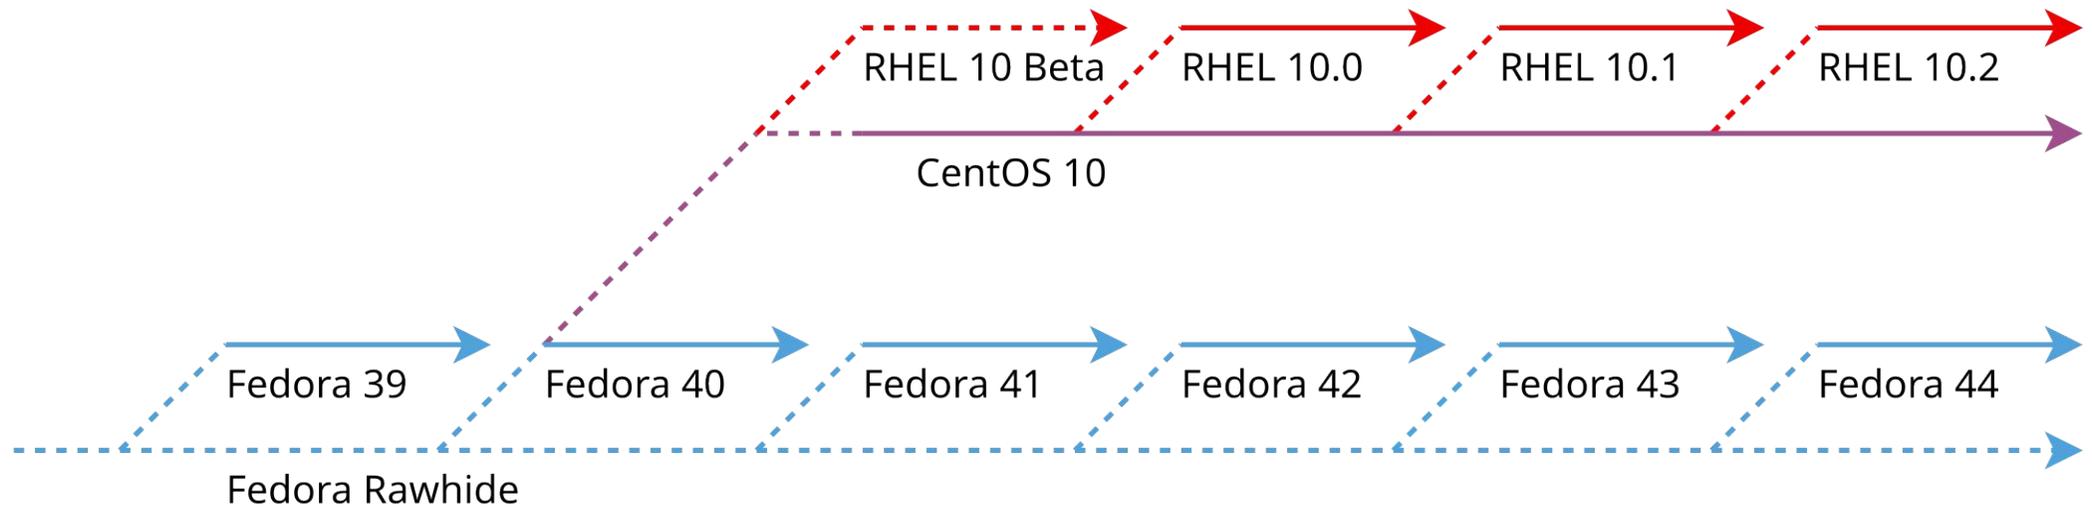

**Myth:  
CentOS is bleeding edge**

# Bleeding edge?

- CentOS 9
  - kernel 5.14 (2021)
  - systemd 252 (2022)
  - glibc 2.34 (2021)
  - gcc 11 (2021)
  - bash 5.1 (2020)
  - rpm 4.16 (2020)
  - python 3.9 (2020)
- CentOS 10
  - kernel 6.12 (2024)
  - systemd 257 (2024)
  - glibc 2.39 (2024)
  - gcc 14 (2024)
  - bash 5.2 (2022)
  - rpm 4.19 (2023)
  - python 3.12 (2023)

# Bleeding edge?

**Myth:**  
**CentOS is still an LTS**

# Still an LTS?

- Ubuntu pioneered this term as at least a 5 year lifecycle
- CentOS has a 5.5 year lifecycle

**Myth:**  
**You can't use**  
**CentOS in production**

**CentOS Stream** is a continuously delivered distribution that lets open source community members contribute to **Red Hat® Enterprise Linux** in tandem with Red Hat developers. CentOS Stream may seem like a natural choice to replace CentOS Linux, but it is not designed for production use. It is intended as a development platform for Red Hat partners and others that want to participate and collaborate in the Red Hat Enterprise Linux ecosystem. Consequently, running CentOS Stream in production environments presents many challenges compared to enterprise-ready distributions like Red Hat Enterprise Linux.

## SELF-SUPPORT (1 YEAR)

- Does not include Red Hat customer support.
- Does not include Red Hat Enterprise Linux Atomic Host.
- Can only be deployed on physical systems.
- Cannot be stacked with other subscriptions.
- Is not intended for production environments.

# CentOS in production?

- social media
- finance
- energy
- space exploration
- education

**Myth:  
CentOS is untested**

# Untested?

- package level tests against each pull request to a package
- package level tests in RPM spec file %check sections
- RHEL gating tests run on combinations of packages
- distro level integration tests run on each compose

**Myth:  
IBM forced the  
CentOS changes**

# IBM mandate?

- January 2014: Red Hat hires CentOS maintainers
- 2016-2017: planning to fix the CentOS contribution problem
- October 2018: IBM announces intent to acquire Red Hat
- July 2019: acquisition closes
- September 2019: CentOS Stream is announced

**Myth:**  
**Greg Kurtzer (Rocky Linux) was**  
**the original CentOS founder**

Hrmm, sounds interesting. I would defiantly be interested to help host this, but personally I am totally not interested in leading a total rebuild distribution. If there is someone else that wishes to lead that effort I would agree that this would be a nice solution.

**Bonus myth:  
Red Hat Linux split  
into Fedora and RHEL**

# RHEL/Fedora split?

- RHEL 2.1 was based on RHL 7.2
- RHEL 3 was based on RHL 9

# RHEL/Fedora split?

- RHL 10 beta (9.0.93) was code named "Severn"
- Fedora Core 1 beta (0.94) was also code named "Severn"

# RHEL/Fedora split?

- RHEL 4 was based on Fedora Core 3
- RHEL 5 was based on Fedora Core 6
- and so on...

**Q & A**

# THAT'S ALL FOLKS
